

## ASSIGNMENT—2

DATE	25/09/2022
NAME	THOSHIMA . B
QUESTION	Build a python code, Assume you get temperature and humidity value (generated with random function to a variable) and write a condition to continuously detect Alarm in case of High Temperature.

### CODE:

```
import random
temp= random.randint(18,25)
print("The Temperature is: ",temp)
humid = random.randint(30,60)

print("The Humidity is: ",humid,"%")
if temp>15:
    print("High Temperature")
if humid >25:
    print("HIgh Humidity")
```

A screenshot of a Python IDE window titled "Assign 2.py - C:/Users/harshy/Documents/Assign 2.py (3.9.13)". The window contains the same Python code as the previous block, with syntax highlighting. The code is as follows:

```
import random
temp= random.randint(18,28)
print("The Temperature is: ",temp)
humid = random.randint(30,60)
print("The Humidity is: ",humid,"%")

if temp>15:
    print("High Temperature")
if humid >25:
    print("HIgh Humidity")
```

```
